

# John Margotti

PRODUCTION SYSTEMS MANAGER / FREELANCE FULL STACK DEVELOPER

## SUMMARY

25 years' experience in managing production I.T. systems, end user training, training documentation, project managing, and production system code maintenance for a publishing company with several locations throughout the USA. Recently attended a web developer bootcamp in NJ to expand my knowledge on the coding side and pursue my passion to become a freelance full stack web developer

## WORK EXPERIENCE

### ● Production Systems Analyst/Manager

ADVANCE LOCAL

1994-present

Responsible for managing systems and employees in the production systems area for Advance Local previously (Newark Star Ledger), a company that owns over a dozen Newspapers and online news content websites across the USA. Duties include but not limited to; 24/7 support for all production systems and end user questions and or issues. Day to day managing and scheduling of department meetings over teams for our enterprise team. Upkeep and testing of the production systems scripts and code that need to be deployed by both the in-house and outside development teams. Test and roll-out production code or script changes needed to handle new product requests, bug fixes, or any requested system enhancements. Manage the enterprise teams' daily schedules, assignments, and project meetings. Handle project managing and task assigning for new production system initiatives. Develop and document new production system workflows for support and end user training. Provide training and support for new and current enterprise-wide end users as needed on all workflows and applications in the production systems area.

### ● FULL STACK DEVELOPER

FREELANCE

2022-present

Attended the NJIT bootcamp program to strengthen my skills at my current job and pursue my dream of becoming a freelance web developer. I design, develop, deploy and maintain code base for clients existing or newly designed web app/web site. I offer all services ranging from simple web design and deployment to full stack apps that could include sql or non sql backend deployed databases.
